PROFESSIONAL SUMMARY

- **4+ years of experience** in designing and developing **Big Data applications** using **Apache Spark** and **Microsoft Azure** platforms.
- Strong expertise in the **Big Data ecosystem**, including **Apache Spark, Python, SQL, Unix, HDFS, Scala, and Hive**.
- Proficient in handling **structured and semi-structured data** at scale, working with various file formats like **JSON, XML, Parquet, CSV, and plain text**.
- Skilled in **Spark RDD** and **DataFrame transformations** using **PySpark**, including complex data manipulations.
- Proficient in writing **Spark SQL queries** for large-scale data processing and optimization.
- In-depth knowledge of **Spark memory management** and **performance tuning techniques** to improve system efficiency.
- Experienced in building efficient **data processing pipelines** for complex data transformation requirements.
- Database experience with **SQL Server**, including data storage, querying, and integration.
- Expertise in **requirement analysis, business rule assessment, source-to-target mapping, and solution design**.
- Familiar with **Agile methodologies**, working with **cross-functional teams** to deliver scalable and high-performance data solutions.
- Hands-on experience with **Unity Catalog** for centralized **data governance, access control, data lineage, and secure data management** across **Databricks** environments.
- Good knowledge of **Microsoft Fabric** architecture and services, including **OneLake, Lakehouse, Data Factory, Data Warehouse, Real-Time Analytics, and Fabric Notebooks**.
- Experience working with **Medallion Architecture (Bronze, Silver, Gold layers)** in **Microsoft Fabric** and **Azure Data Engineering** environments.
- Familiar with implementing **end-to-end data integration and transformation pipelines** using **Microsoft Fabric** and **Azure services**.
- Knowledge of **Delta Lake**, including **data versioning, schema evolution, and ACID transaction handling** in distributed data environments.

TECHNICAL SKILLS

Microsoft Cloud Services/Big Data Technologies	Azure Databricks Azure Data Factory Azure SQL Azure Delta Lake Storage Gen 2 Apache Spark Azure Synapse Analytics Microsoft Fabric
Programming Languages	Python Scala Java
PL/SQL Programming Languages	SQL Spark SQL

PROFESSIONAL EXPERIENCE

Project 1:

Project Name: LMS

Duration: SEP 2024 to Present

Roles & Responsibilities:

- Worked on developing scalable **Azure Data Engineering solutions** for analyzing Learning Management System (LMS) data.

- Designed and implemented **ADF pipelines** to extract and load student activity, course, attendance, quiz, and assignment data from multiple source systems.
- Utilized **Azure Databricks, PySpark, and Spark SQL** to transform and process large-scale academic datasets efficiently.
- Built automated ETL workflows for tracking student learning behavior, course completion status, faculty performance, and assessment analytics.
- Developed data ingestion frameworks to process structured and semi-structured data from **CSV, JSON, SQL Server**, and API sources into **ADLS Gen2**.
- Implemented **Delta Lake architecture** for reliable and optimized data storage with improved query performance.
- Worked on **data cleansing**, validation, standardization, and transformation processes to improve data accuracy and reporting quality.
- Created reusable and dynamic ETL components using parameterized pipelines and notebooks to reduce manual efforts.
- Integrated processed data with **Power BI** dashboards to generate insights on student engagement, academic progress, and course effectiveness.
- Worked with **Unity Catalog** for managing secure data access, governance, and data lineage across Databricks environments.
- Performed Spark performance tuning using partitioning, caching, and optimization techniques to improve job execution time.
- Supported production deployments, monitored pipeline executions, and resolved ETL and data processing issues.
- Collaborated with business users, academic teams, and reporting teams to gather requirements and deliver analytical solutions.
- Followed **Agile methodology** and participated in sprint planning, daily stand-up meetings, testing, and release activities.
- Used **GIT** for version control, code maintenance, and deployment activities.

Project 2: Distributed Data Processing Platform

JAN 2022 to SEP 2024

Roles and Responsibilities:

- Designed and developed end-to-end **ETL/ELT pipelines** using **Azure Data Factory (ADF)** for processing student admissions, attendance, examination, and academic data.
- Ingested data from multiple sources such as **SQL Server, CSV, Excel**, and external APIs into **Azure Data Lake Storage Gen2 (ADLS Gen2)**.
- Developed scalable data transformation logic using **Azure Databricks, PySpark, and Spark SQL** for cleansing, validation, and enrichment of student data.
- Implemented **incremental loading, watermarking, and parameterized pipelines** to improve pipeline performance and reduce processing time.
- Designed and maintained **Bronze, Silver, and Gold layer architecture** for efficient data processing and analytics.
- Worked on **data quality checks**, duplicate removal, null handling, and schema validation for accurate reporting and analytics.
- Created optimized **Delta Lake tables** and improved query performance using partitioning and caching techniques.
- Developed reusable frameworks and dynamic pipelines for automated academic and operational reporting.

WORK EXPERIENCE

Company	Duration	Location
TANGENTWORKS TECHNOLOGIES	JAN 2022 to Present	Chennai

ACADEMIC DETAILS

- **MSC in Andhra University(2020)**

Achievements

- Received Spot Award for outstanding performance and contributions to the team.
- Consistently recognized for performance enhancements through multiple appreciations and acknowledgments.

DECLARATION

- I hereby declare that the information mentioned above is correct up to the best of my knowledge, and I bear the responsibility for the correctness of those mentioned above.

(Anil. G)
